

ADRENAL INSUFFICIENCY

AI

CAUSES

TEST

HPA axis

TREATMENT

Tertiary

Mass Lesions

- Craniopharyngiomas
- metastases

XRT

Infiltrative

- hemochromatosis
- sarcoidosis

Infectious

- TB or Abscess

Infarction (Sheehan Syndrome)

Trauma/Surgery

Secondary

Autoimmune adrenalitis

Infectious adrenalitis

- TB, fungi, syphilis

Tumor/ Metastases

Hemorrhage

Drugs

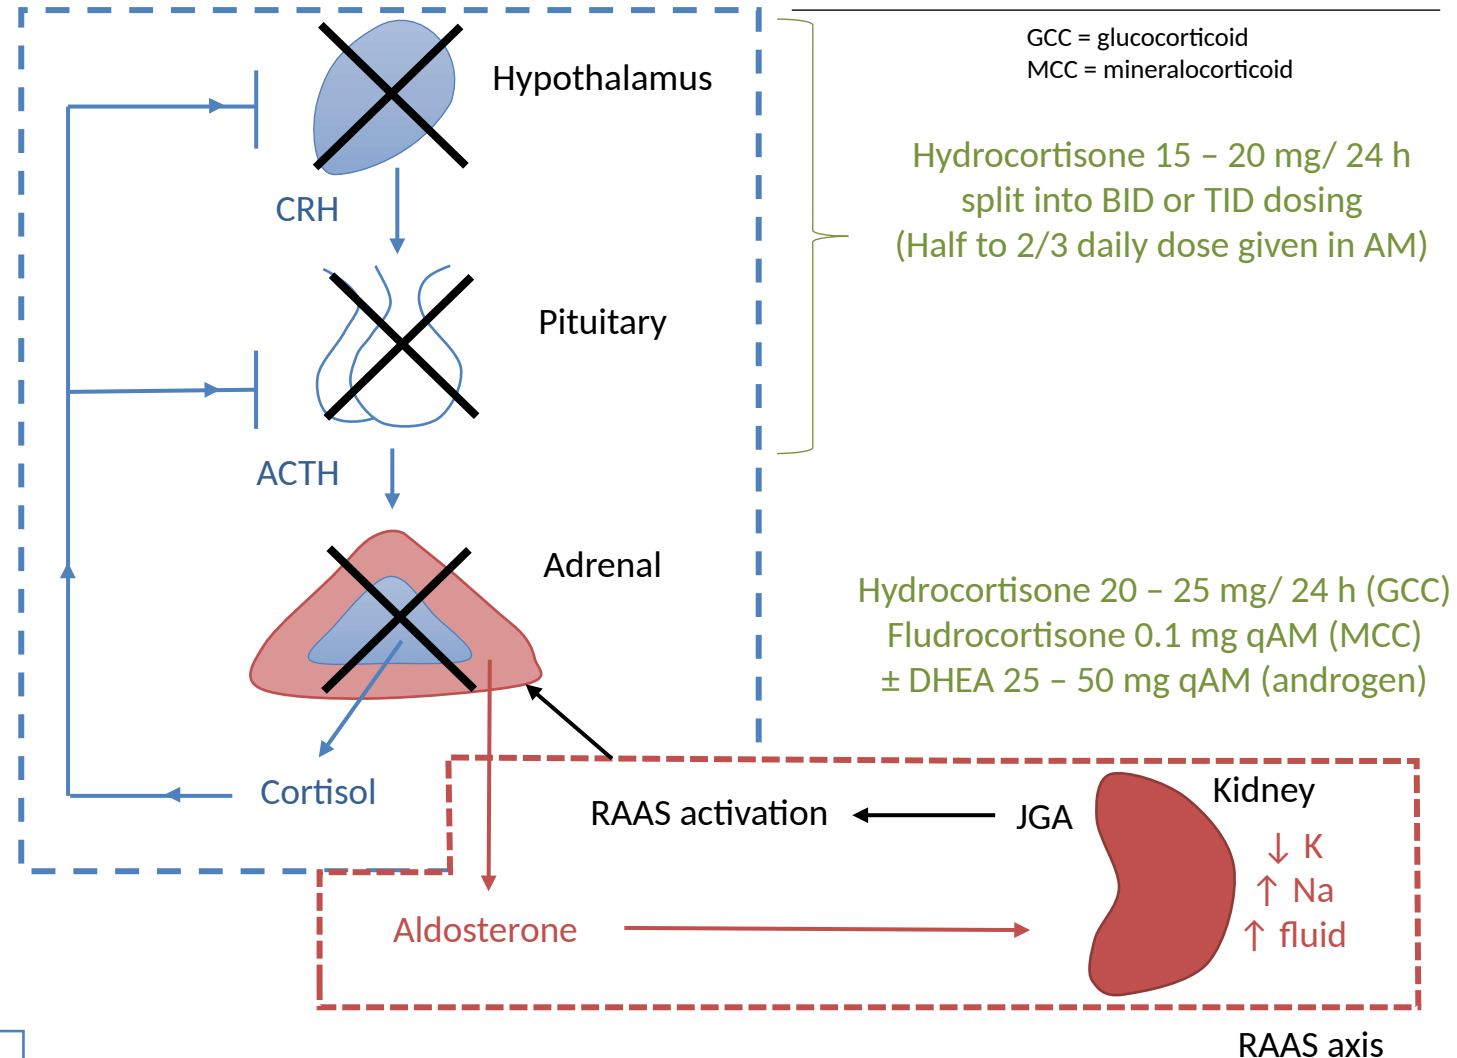

- steroids, azoles, etomidate, PBT, phenytoin, rifampicin

Primary

Positive Cort Stim
↓ ACTH
(even after CRH test)

Positive Cort Stim
↓ ACTH

Negative Cort Stim
↑ ACTH
↓ aldosterone
↑ renin

Click on the “AI buttons” to advance through the causes, tests and treatments for each.

8am Cortisol to diagnose:
<3 – ruled in
